## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. **Claims 1-5**, drawn to a “data link record” table for a POS containing at least channel specification information for each unchannelized port including a virtual channel specification, classified in class 370, subclass 907.
  - II. **Claims 6-20**, drawn to a method of provisioning a data link in a networking environment, classified in class 370, subclass 254.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as *holding* connectivity information for unchannelized port including a virtual channel specification. See MPEP § 806.05(d). In particular, Invention I relates to *management and administration* of a network and Invention II relates to *provisioning* a network (although dependent claim 15 further recites using a management and administration interface to display the data link information). Furthermore, Invention I relates to management and administration of a *Packet over SONET* (POS) Optical network and Invention II relates to provisioning a *data network* (i.e., not necessarily a POS network since a TDM network can use e.g., channelized connections). Specifically, none of the dependent claims 7-20 recite an optical network. In addition, Invention II does not further include the limitation of holding the channel specification where the channel specification includes a virtual channel specification associated therewith (see e.g., applicant’s

Art Unit: 2663

figure 2 in relation to blocks 222 and 224). In particular, Invention II does recite in claim 8 selecting a first virtual channel of an unchannellized port, however, the claim does not recite holding the information e.g., in a data link record table. Specifically, claim 14 (not related to claim 8) recites that recording connectivity information is not performed until the data link is established or provisioned (however, claim 14 does not recite what connectivity information is recorded such that only channelized port information could be recorded). Thus the restriction is proper based on the claim recitations.
